Foreword

Working together, Forest Fire Management Victoria (FFMVic*) and the Country Fire Authority (CFA) have developed this Joint Fuel Management Program which covers the Gippsland FFMVic Region and South East CFA Region. It demonstrates our commitment to working more closely together to deliver the best bushfire risk reduction outcomes for Victorians.

The Joint Fuel Management Program is planned to achieve an integrated and risk-focused fuel management program across public and private land. It is designed to implement long-term strategic bushfire management strategies that outline how the risk of bushfires is managed for the protection of life and property on public and private land, while maintaining and improving natural ecosystems.

Fuel management is recognised as one of the most effective ways to reduce the impacts of bushfires on communities and the environment.

The Program has been shaped by a variety of research and local information, such as risk-based planning detailed within our strategic bushfire management plans, specialist input from FFMVic, CFA staff and volunteers and key industries, as well as knowledge from local communities, including Traditional Owners and key stakeholders.

It includes not only fuel management activities which address bushfire risk close to towns but also to support strategies to address the spread of large landscape-scale fires and reduce the bushfire risk to ecosystems.

Planned burns and other non-burning fuel treatments have been identified across all land tenures. However, only private property burns that have a direct bushfire risk reduction benefit, are high profile or where a community need is identified, are included on this plan. Other CFA planned burns will be added to the Joint Fuel Management Program over time, so the community can see the complete fuel management program from both agencies.

The Joint Fuel Management Program replaces the Department of Environment, Land, Water and Planning's (DELWP) Fire Operations Plan (FOP).

The Program is reviewed annually, based on feedback and local knowledge from communities and key stakeholders. Our highest priority however, in carrying out fuel management activities, is always the need to reduce the impact of bushfires on life and property.

We would like to recognise the work that has been put into developing this Joint Fuel Management Program, by FFMVic, CFA and local communities. We encourage your continued input to ensure our plans protect those assets and values which are important to all Victorians.

* Forest Fire Management Victoria (FFMVic) – is the organisation that delivers services to achieve DELWP's legislated responsibilities. It consists of specialist staff from DELWP, Parks Victoria, Melbourne Water and VicForests.

Joint Fuel Management Program

This Joint Fuel Management Program (JFMP) lists fuel management activities in the Gippsland DELWP Region and the South East CFA Region only.

It covers Latrobe, Macalister, Tambo and Snowy DELWP Districts and CFA Districts; District 8, District 9, District 10, District 11 and District 27. (Map 1).

The schedules contained within this document set out where and when activities are planned to occur for the period from 2019/20 to 2021/22. The planned activities are listed by Lead Agency.

To view all fuel management works in your area, the statewide Joint Fuel Management Program map can be viewed at <http://www.ffm.vic.gov.au/jfmp>

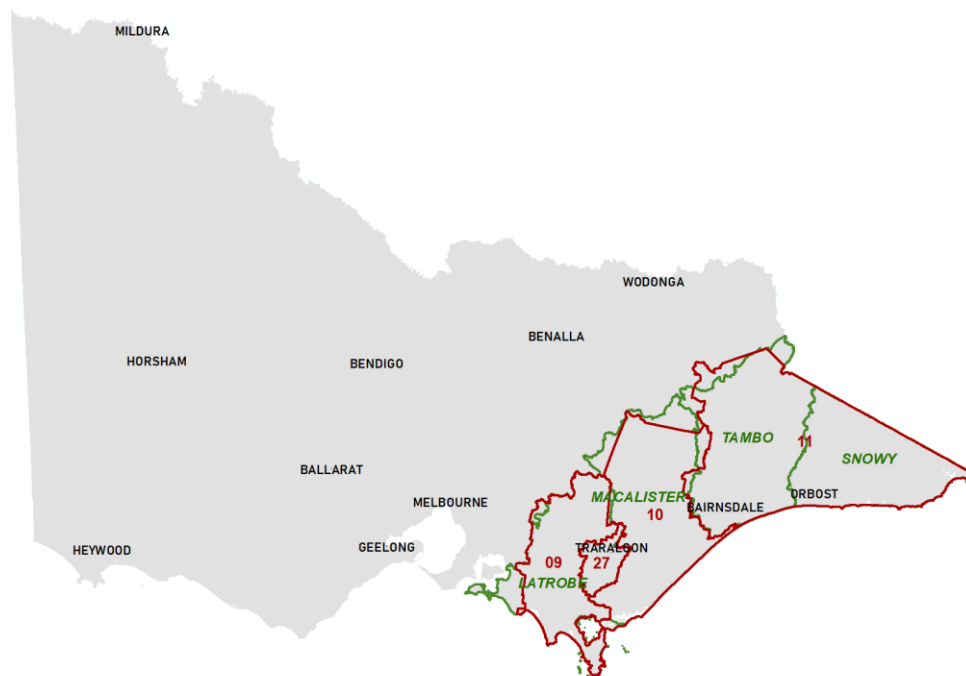

This document contains the following details:

Planned Burns - lists fuel reduction, ecological and other planned burns by indicative year for the three-year period.

Non-Burn Fuel Treatments - summarises the program that uses methods other than burning to achieve fuel management objectives.

It is important to note that the ability to carry out planned activities is dependent on seasonal and local weather conditions. To allow for this, planned burns from the second and third years of the program may be brought forward to the current year to replace a burn planned for the first year.

Map 1: DELWP and CFA Districts included on this Joint Fuel Management Program

The JFMP is prepared and will be implemented in accordance with *Safer Together: A new approach to reducing the risk of bushfire in Victoria*, the *Code of Practice for Bushfire Management on Public Land 2012* and relevant CFA and FFMVic Instructions, Manuals and Guidelines.

Burns on public land associated with logging regeneration as well as small heap burns are not included in the Joint Fuel Management Program as they are approved as part of separate planning processes.

Objectives for Fuel Management

This JFMP has been developed to:

- achieve bushfire risk reduction to protect human life and property,
- maintain and enhance ecosystem resilience, and
- achieve other desired outcomes as identified by communities.

These objectives for public land covered by this JFMP are currently provided by Strategic Bushfire Management Plans for the East Central & Alpine and Great Gippsland Bushfire Risk Landscapes (BRL). However, these will be superseded in late 2019 by the Bushfire Management Strategies – Gippsland Region, currently being developed by FFMVic, CFA and local communities to cover all land tenures.

As part of *Safer Together*, the Victorian Government adopted a Statewide risk reduction objective to guide fuel management, which commits to maintaining bushfire risk at or below a residual risk of 70% in the long-term.

Residual risk is the risk, on average, that bushfires will impact on life and property across the landscape. It is expressed as the percentage of the risk that remains after bushfire history and fuel management (mainly planned burning) activities are considered.

Each District works towards managing the local bushfire risk through identifying planned burns and other fuel management works, which collectively will meet the Statewide risk reduction target. This year, targets for residual risk were calculated for each DELWP District.

Table 1 demonstrates the changes to residual risk through implementation of the JFMP compared to the current level of risk and the District residual risk targets.

The interim regional residual risk target for Gippsland is 71% or below. Residual risk for the region is currently at 71.6%. Analysis of the JFMP indicates that residual risk will trend downwards to maintain residual risk below target. If implemented in full, residual risk will trend down to 63% by the year 2022, compared to 82% without any planned burning. Table 2 below shows current and estimated residual risk with the 3-year JFMP fully implemented compared with a JFMP not implemented for each district and across the region.

Table 1: Changes to Residual Risk through implementation of the JFMP

Residual risk categories	Latrobe District	Macalister District	Tambo District	Snowy District	Gippsland Region
Interim Residual Risk Target	80	65	65	65	71
Current Residual Risk (30 June 2019)	79.9	40	67.5	71	71.6
Projected Residual Risk by 2022 with implementation of JFMP	78.8	42	58.5	51.7	62.9
Projected Residual Risk by 2022 without implementation of JFMP	85.5	57.4	75.9	85.4	81.6

Table 2 provides a summary of the area of planned burning in all Districts over the next three years to achieve fuel management objectives. Other fuel management works are detailed in Appendices 1 and 2.

Endorsement

The 2019/20 – 2021/22 Joint Fuel Management Program has been endorsed by:

Deputy Chief Fire Officer / Director Forest and Fire Operations, Gippsland DELWP Region:	Beth Roberts
Assistant Chief Officer, South East CFA Region:	Trevor Owen

Approval

The 2019/20 – 2021/22 Joint Fuel Management Plan has been approved by:

DELWP Chief Fire Officer:	Chris Hardman
CFA Chief Officer:	Steve Warrington

Noting for on-ground ignition and delivery of cross tenure and private property burns, FFMVic and CFA agency responsibilities remain unchanged.

How to become involved in the development of the Joint Fuel Management Program

FFMVic and CFA welcome comment on fire management all year round, on all parts of the planning process – both strategic and operational. Please be aware that due to the planning cycle your comments relating to certain aspects of the program may not be included until the following year's Joint Fuel Management Plan.

Comments and suggestions relating to the JFMP can be sent to:

Regional Fuel Management Coordinator, Gippsland, DELWP
574 Main Street
Bairnsdale 3875

Vegetation Management Officer, South East Region, CFA

Upcoming burns

Planned Burns Victoria (PBV) is a new, easy-to-use, opt-in system that you can customise to suit your particular notification needs. The system notifies people when a planned burn in Victoria is close to being ignited

You can simply type in a postcode and have instant access to information about planned burns on public and/or private land that are close to being ignited. You can access the system at:
<https://plannedburns.ffm.vic.gov.au>

Appendix (1): FFMVic Schedules of Activities

Schedules 1 - 4 contain the details of FFMVic -lead planned burning activities. Please note that the planned burn year identified for each planned burn is indicative only and may be changed due to weather conditions and operational requirements.

Schedules 5 - 8 contain a summary of proposed non-burning fuel treatments for 2019/20. Some of these fuel treatments are annual, with others prioritised based on the seasonal conditions and which planned burns are scheduled. Accompanying maps provide detail on where these fuel treatment activities are located. Note that the maps show approximate areas only and the actual treatment area will be dependent on the condition of the fuels at the time of assessment. Please contact your local DELWP or Parks Victoria office if further detail is required.

The following abbreviations maybe used in the following Schedules: ‘*’ asterisk on burn name denotes a cross tenure burn; – Fuel Reduction Burn; ECO - Ecological burn; FMZ – Fire Management Zone; APZ - Asset Protection Zone; BMZ – Bushfire Moderation Zone; LMZ - Landscape Management Zone; PBEZ – Planned Burn Exclusion Zone; NZ -Not Zoned; FPA – Fire Protected Area.

Glossary

This glossary provides information on terms contained within the body of this document and the schedules.

Burn Type – indicates the primary purpose of the burn including FRB burn (FRB), ECO burn (ECO).

Burn Number and Name– the unique identifier for each burn or planned fuel management activity.

Cross-tenure burn – a burn that covers both public and private land

Fire Management Zone (FMZ) – an area of public land in which fire is managed for specific asset, fuel and ECO objectives. Values included in this column can be APZ - Asset Protection Zone; BMZ – Bushfire Moderation Zone; LMZ - Landscape Management Zone, PBEZ – Planned Burn Exclusion Zone; or, NZ -Not Zoned.

Forest Fire Management Victoria (FFMVic) - is the organisation that delivers services to achieve DELWP's legislated responsibilities. It consists of specialist staff from DELWP, Parks Victoria, Melbourne Water and VicForests.

Land Management Objective - identifies the desired land management outcome(s) of the burn.

Lead Agency - The Lead Agency for a planned burn is determined by the burns distance from public land. Within 1.5 km of public land, planned burning on non-public land falls within DELWP's legislative scope and DELWP can choose to be the Lead Agency. If it is outside 1.5 km of public land, DELWP is unable to undertake the planned burn; instead, the CFA will be the Lead Agency to undertake that burn.

Local Government Area (LGA) – the municipality in which most of the fuel management activity is located.

Location – a direction and distance of the planned burn from the nearest major township/locality.

Planned Burns - Planned burning is one of FFMVic and CFA's most important fire prevention activities. It involves the controlled application of fire during periods of lower fire risk, to achieve one of three main purposes: fuel reduction (FRB), ecological (ECO) management and forest regeneration (REG).

It is important to understand that planned burning operations do not stop or eliminate the risk of bushfires. However, Victorian research, and similar information from other parts of Australia and overseas, clearly shows that firefighters have a much better chance of managing bushfires in areas where planned burns have been carried out.

Approved burns in this year's Plan will require a range of preparation works to make the planned area ready to ignite when the weather and other conditions are right. Preparation works may include, brushing up or grading of existing boundaries and internal tracks, management of hazardous trees, the construction and preparation of boundary and control lines with machinery and pest plant controls. The preparation works will have on-site inspections which will assess the surrounding assets and planned burn objectives.

Private Property Burn – burn that occurs wholly on private land.

Planned Burn Size – the maximum area of the fuel management activity measured in hectares (ha), including areas specifically excluded from disturbance.

Strategic Fuelbreak: A strategic fuelbreak is a strip of land where vegetation has been modified to reduce the amount of fuel available to burn during a bushfire.

New Burn– 'NEW' = New burn did not appear on last year's JFMP. *Blank box* = Not a new burn. Burn was approved in the previous JFMP but has not been carried out, it is included in this JFMP and may be conducted at any time.

Non-Burning Fuel Treatments – Non-burning fuel treatments such as the maintenance and construction of fire control lines, fire access tracks, fuel breaks, fire infrastructure and other fuel management activities are required to support the planned burning program. Treatments to achieve these works can include slashing, pruning, chemical application (in alignment with safety standards), grazing or other operations (such as ploughing, mulching or rolling) that may be more appropriate or practical in certain areas. For example, fuel on small areas or blocks located within townships may be treated mechanically, where burning is impractical. These methods may also be more suitable in certain vegetation types.
